## Easter day

In 1800, Carl Friedrich Gauss, the German mathematician, produces formulas to calculate the date of Easter day. Here is a simplified method, valid from year 1900 to year 2099 of the Gregorian calendar. Write down and fill in the grid step by step.

- Choose a year and name it $\mathbf{A}$.
- $\mathbf{R}$ is the rest of the Euclidian division of $\mathbf{A}$ by 4 .
- $\mathbf{S}$ is the rest of the Euclidian division of $\mathbf{A}$ by 7 .
- $\mathbf{T}$ is the rest of the Euclidian division of $\mathbf{A}$ by 19 .
- $\mathbf{B}=(19 \times \mathbf{T})+24$
- $\mathbf{M}$ is the rest of the Euclidian division of $\mathbf{B}$ by 30 .
- $\mathbf{C}=(2 \times \mathbf{R})+(4 \times \mathbf{S})+(6 \times \mathbf{M})+5$
- $\mathbf{N}$ is the rest of the Euclidian division of $\mathbf{C}$ by 7 .
- $\mathbf{P}=\mathbf{M}+\mathbf{N}$.

| $\mathbf{A}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ | $\mathbf{B}$ | $\mathbf{N}$ | $\mathbf{C}$ | $\mathbf{M}$ | $\mathbf{P}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |

If $\mathbf{P}<10$, then Easter day will be on the $(\mathbf{P}+22)$ of March.
If $\mathbf{P}>9$, then Easter day will be on the $(\mathbf{P}-9)$ of April.
When will Easter day fall in year A chosen before ? (2012 ? 2013 ?/2014 ?)

## Birthday

This method will help you find the weekday on which a preselected date falls.
Write down and fill in the grid step by step.

- $\mathbf{A}$ is the year when you were born.
- $\mathbf{D}$ is the difference between $\mathbf{A}$ and 1901.
- $\mathbf{Q}$ is the full quotient of the Euclidian division of $\mathbf{D}$ by 4 .
- $\mathbf{N}$ is the number of days between January 1st and the end of the month preceding your month of birth.
- $\mathbf{J}$ is the date of your birthday.
- $\mathbf{S}=\mathbf{D}+\mathbf{Q}+\mathbf{N}+\mathbf{J}+1$
- $\mathbf{R}$ is the rest of the Euclidian division of $\mathbf{S}$ by 7 .

| $\mathbf{A}$ | $\mathbf{D}$ | $\mathbf{Q}$ | $\mathbf{N}$ | $\mathbf{J}$ | $\mathbf{S}$ | $\mathbf{R}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |

You will find the result in the following grid. (20 March 1975 ? Your birthday ?)

| If R is... | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| The weekday is... | Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
